

Chapter 6

Introducing Active Directory

Lab Timetable and Known Issues

Lab	Time	Issues
6-1	15-25 min	Step 13. The Create DNS Delegation check box may be grayed out if 410Server1 does not find a DNS server with the 410Server2012.local zone. This is okay because you will be installing DNS on 410Server1 and the zone will be created automatically.
6-7	10 minutes	Step 3. If the Search Active Directory icon is grayed out, it is probably because the network connection does not recognize the network as a domain network. To solve this, right-click Start, click Network Connections, and then disable and then enable the network connection. The connection should say it is connected to the 410Server2012.local network.
